

THE BEAUCERON ANALYST

BEAUCERON ANALYST

The Beauceron Analyst optimizes your time by identifying and prioritizing reported malicious emails so you can focus on real threats to your organization.

Reduce risk by stopping an incident before it happens. Drive engagement and behavior change with automatic feedback and rewards. Close gaps with email filtering tools and customize rules that best fit your organization's security processes.

THE ANALYST MIGHT BE FOR YOU IF:

Your organization has a fully engaged community who are actively reporting suspicious emails but there is a large volume of reported emails to review.

You want visibility into the number of malicious emails that are swimming through filtering tools.

Real malicious emails are being reported and you want to gather metrics around them. Your security team is receiving too many emails to manually respond to each one.

You want to use real phishes as training material to prevent future attacks.

You need an automated solution shaped by your processes.

BEUCERON ANALYST HIGHLIGHTS

The Analyst gathers insights, automatically actions reported emails and saves time to focus on the real threats targeting your organization.

Create a customizable series of rules that run automatically when specific email criteria is reported.

Improve engagement and take advantage of an educational opportunity by automatically closing the feedback loop when an email is reported.

"The Reward User action in the Analyst is such a vast improvement to the traditional way of rewarding users. It's a game changer. That alone is enough reason to use the Analyst."

Security Compliance & Training Specialist,
Higher Education Organization

Reinforce behavior change by rewarding real malicious email reports. Educate colleagues on the difference between phish and spam.

Make timely decisions at a glance by leveraging AI's predictive confidence to help with fast decision-making and reduce effort.

Prevent an incident by using the Purge and Delete functions to remove emails from inboxes across the organization.

Safely preview reported emails to address preliminary concerns in one place.

Turn real phishes targeting your organization into simulations for a relevant learning experience.

BEUCERON PRO-TIP

Take advantage of Verified Senders to gain additional insights.

Use the Analyst in conjunction with Verified Sender to help differentiate between legitimate and illegitimate communications with real-time feedback that encourages further reporting of malicious emails.

Verified Sender marks the domains you choose as safe and instantly informs the individual before they choose to report it via the PhishForward button.
